

SIMS – Student Intervention Monitoring System

This screen shot is from a page within the SIMS tool that allows users to search for students based on grade level or based on students who are flagged for or currently have an active intervention.

Once a group of students has been selected, a list is displayed with the intervention status on the right. When the cursor hovers above one of those icons, that student's reason for being selected appears next to the cursor.

After selecting one student for problem solving, their profile appears in greater detail. An extended profile can be available with more detailed student information. Team notes can be kept to document conversations of educators who work with a particular student. New interventions can be assigned and active interventions can be modified using links from this screen.

This is an example of a math intervention.
Interventions can be time-bound and can be connected to multiple teachers and other educators.

Assign New Intervention and Progress Monitor

Assign Goal Learning

Assign Objective Math

Assign Category Number Knowledge or Number Concept Strategies

Description Interventions in this category support the development of beginning number concepts such as forward and backward counting, number identification, subitizing, and ordering and sequencing numbers.

Assign Intervention Identifying the Number Before

Description Identifying the number before is defined as automatically naming the whole number that precedes the indicated number without needing to count from any number. This should occur both in isolation and within a context. Accurately identifying the number before allows the child to negotiate the number system flexibly including estimating the results of subtraction and division. Activities that support the development of identifying the number before include Number Track Before, Sliding Backward, and Sliding Card Before. For directions and more activities like these, see pgs. 177-178 of Chapter Ten in Learning Mathematics in the Primary Grades. For ideas regarding matching the number range to the needs of the child, see the Developmental Guidelines. Use a variety of activities over time, with gradual adjustments to the number size as the child progresses.

Assign New Intervention and Progress Monitor

Assign Goal Engagement

Assign Objective Attendance

Assign Category Communication on Compulsory Attendance

Description These interventions are provided by administrators and support staff. They include both written and verbal communication to inform the recipient(s) about compulsory attendance laws, a student's current attendance rate, and the impact of attendance on relationships, learning, and engagement.

Assign Intervention Notice and Invitation to Habitual Truancy Conference

Description Parents must be noticed as soon as their student misses 5 full or part days without an excuse. The letter invites the student and family member to a conference and explains the legal steps that can be taken if the student continues to be truant. Use the HT Conference Invitation letter for the appropriate grade in English, Spanish, or Hmong.

Frequency: 1 As Needed (Rec: 1 time As Needed)
